LAMP:

LAMP stands for **L**inux, **A**ppache, **M**ySQL, and **P**HP. LAMP is an open source Web development platform Linux is the operating system with Apache web server and MySQL Database that uses PHP to process dynamic website content.

Sometimes Perl or Python is used instead of PHP, and Developers that use these tools with a Windows operating system instead of Linux are said to be using *WAMP*; with a Macintosh system, *MAMP*; and with a Solaris system, *SAMP*.
